Message from 'the Prez'

It has been a little while since my last message. What a crazy year this has been. First let me say that the hard copy form of *Paw Prints* is back. We have had lots of customers let us know in no uncertain terms that they like this little bit of pet news. We will also be sending this out through email so some of you may be lucky enough to get it twice!

On a personal note, my family has increased to include four great Bernese Mountain Dogs. Our latest addition is quite the character and keeps us very busy. Our boy is now two and he is having a great deal of fun with agility, carting and some obedience. He is a very gentle and kind soul. Bella is going strong, she will be eight years old in the next few weeks and has taken up an almost permanent position on the bed. We have Passion now, she is Halo's daughter and so we still have a little piece of both Halo and Bandit. It has been almost two years since both crossed over the Rainbow bridge and we still miss them an incredible amount.

Pets First will be ten years old this February. We have a great number of customers who have been going happily and healthily along for those ten years. A great testament to the great food that we continue to make available. Well we'll speak again soon.

Merry Christmas from all of us at Pets First!!

What's News

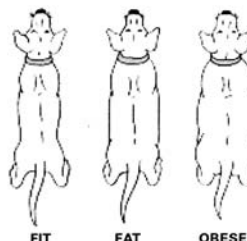

Pets First has done it again.

We have spent a great deal of time perfecting an incredible new formulation. We are proud to introduce a new Lamb diet for dogs. This diet mirrors all the great ingredients we have in our flagship Chicken and Brown Rice formula **without the CHICKEN**. We have eliminated the chicken and replaced it with **New Zealand Lamb**. This is an excellent diet for those dogs that have shown some problem with chicken or chicken fat. For more information go to our site search and search for 'New Zealand Lamb'.

Is Your Dog Fat?

Weight charts can give you a general idea of where your dog should tip the scales. They don't always take into account the many variations that are facts of life. The best way to tell is to use the **rib test**.

This is done simply by placing your thumbs on either side of the dogs spine and on the sides of the chest cavity. Run your fingers along his sides, toward the tail, and try to feel his ribs. If the ribs can be easily felt but aren't visible – your dog is in normal condition. If you can't feel the rib then that is a sign of extra weight. For more information go to our site and perform a site search for the term 'overweight'.
